JANUARY - 1973 - JANVIER

(Urban agglomerates and Urban centres
of 10,000 population and over)

(Agglomérations et localités urbaines
de 10,000 habitants et plus)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan areas, urban agglomerates and urban centres of 10,000 population and over, as defined by the 1971 Census are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year, at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q, available only for the centres of 10,000 population and over (including the Metropolitan areas and other urban agglomerates). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, quarterly tables follow monthly tables.

Publication

Regular users of the statistical series of starts and completions will notice changes in the presentation of the data from the 1972 publications. This publication contains information on starts and completions in urban agglomerates and centres of 10,000 population and over as defined by the 1971 Census. In the 1971 Census, the concept of "census agglomerate" is somewhat broader than the previous 1966 Census definition of "urban area". In 1966, the population of what is equivalent to a census agglomeration was strictly urban. In 1971, complete rural municipalities are included in the Census Agglomerate provided the urban part of these municipalities constitutes with the main urban centre a continuous built-up area with no separation greater than one mile from the main urban centre. Metropolitan Areas, Large Urban Agglomerates and other Census Agglomerates may therefore contain fringe localities of less than 10,000 urban population.

If users are interested in monthly housing data for municipalities that do not meet the definition of an urban agglomerate of 10,000 population and over as defined for the purpose of the starts and completions survey, they may refer to the monthly publication "Building Permits", catalogue no. 64-001.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, agglomérations urbaines et localités urbaines de 10,000 habitants et plus, telles que définies pour les fins du recensement de 1971, font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 10,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux trimestriels suivent les tableaux mensuels.

Publication

Les usagers de la série des mises en chantier et des achevements remarqueront des changements dans la présentation des données comparativement à celles fournies dans les publications de 1972. Le présent rapport contient des données sur les mises en chantier et les achevements dans les agglomérations et les localités urbaines de 10,000 habitants et plus, telles qu'établies aux fins du recensement de 1971. Dans le recensement de 1971, le concept "d'agglomération urbaine" a été élargi par rapport à la notion de "zone urbaine" de 1966. En 1966, la population des agglomérations de recensement était strictement urbaine. En 1971, des municipalités rurales entières sont comprises dans les agglomérations de recensement pourvu que la partie urbaine de ces municipalités forme avec un centre urbain d'importance une zone habitée continue. Les zones métropolitaines, les grandes agglomérations et les autres agglomérations urbaines peuvent donc contenir des banlieux qui soient inférieures à 10,000 habitants.

Si les usagers veulent obtenir des données de la construction domiciliaire pour les municipalités autres que les agglomérations et localités urbaines de 10,000 habitants et plus, ils peuvent consulter la publication "Permis de bâtir", no de catalogue 64-001.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'unité de logement". Pour toute période donnée,

the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling units are; each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversion". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boat-houses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwelling structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into

l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans oublier à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tous plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitenciaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajus-

account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with
Tabulations Presented in this Report

The 1971 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

tements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement
avec ceux du présent rapport

Le recensement de 1971 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simple détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1971 Census are not enumerated in the Starts and Completions Survey.

Autrement dit, cette catégorie inclus:

- (i) les duplex jumelés.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1971 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

(1) In this table, metropolitan areas, large urban areas and other urban areas include data corresponding to the agglomerates and localities shown in Table M-7 to M-14 inclusive. These tables include housebuilding activity in the urbanized fringe areas even though these areas are under 10,000 population. For classification purposes, metropolitan areas are agglomerations of more than 100,000 population; large urban areas are agglomerations and localities of 40,000 to 100,000 population; other urban areas are agglomeration and localities of 10,000 to 40,000 population. - Dans ce tableau, les zones métropolitaines, les grandes agglomérations, les autres agglomérations et localités urbaines incluent les données correspondant aux zones telles que présentées dans les Tableaux M-7 à M-14 inclusivement; ces tableaux comprennent la construction domiciliaire dans les banlieues même si celles-ci ont une population inférieure à 10,000 habitants. Pour fins de classification, les zones métropolitaines sont des agglomérations de plus de 100,000 habitants; les grandes agglomérations sont des zones urbaines de 40,000 à 100,000 habitants, les autres zones urbaines sont des agglomérations et localités urbaines de 10,000 à 40,000 habitants.

(Agglomérations et localités urbaines
de 10,000 habitants et plus)

FEBRUARY - 1973 - FÉVRIER

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan areas, urban agglomerates and urban centres of 10,000 population and over, as defined by the 1971 Census are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year, at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q, available only for the centres of 10,000 population and over (including the Metropolitan areas and other urban agglomerates). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, quarterly tables follow monthly tables.

Publication

Regular users of the statistical series of starts and completions will notice changes in the presentation of the data from the 1972 publications. This publication contains information on starts and completions in urban agglomerates and centres of 10,000 population and over as defined by the 1971 Census. In the 1971 Census, the concept of "census agglomerate" is somewhat broader than the previous 1966 Census definition of "urban area". In 1966, the population of what is equivalent to a census agglomeration was strictly urban. In 1971, complete rural municipalities are included in the Census Agglomerate provided the urban part of these municipalities constitutes with the main urban centre a continuous built-up area with no separation greater than one mile from the main urban centre. Metropolitan Areas, Large Urban Agglomerates and other Census Agglomerates may therefore contain fringe localities of less than 10,000 urban population.

If users are interested in monthly housing data for municipalities that do not meet the definition of an urban agglomerate of 10,000 population and over as defined for the purpose of the starts and completions survey, they may refer to the monthly publication "Building Permits", catalogue no. 64-001.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, agglomérations urbaines et localités urbaines de 10,000 habitants et plus, telles que définies pour les fins du recensement de 1971, font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 10,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux trimestriels suivent les tableaux mensuels.

Publication

Les usagers de la série des mises en chantier et des achèvements remarqueront des changements dans la présentation des données comparativement à celles fournies dans les publications de 1972. Le présent rapport contient des données sur les mises en chantier et les achèvements dans les agglomérations et les localités urbaines de 10,000 habitants et plus, telles qu'établies aux fins du recensement de 1971. Dans le recensement de 1971, le concept "d'agglomération urbaine" a été élargi par rapport à la notion de "zone urbaine" de 1966. En 1966, la population des agglomérations de recensement était strictement urbaine. En 1971, des municipalités rurales entières sont comprises dans les agglomérations de recensement pourvu que la partie urbaine de ces municipalités forme avec un centre urbain d'importance une zone habitée continue. Les zones métropolitaines, les grandes agglomérations et les autres agglomérations urbaines peuvent donc contenir des banlieux qui soient inférieures à 10,000 habitants.

Si les usagers veulent obtenir des données de la construction domiciliaire pour les municipalités autres que les agglomérations et localités urbaines de 10,000 habitants et plus, ils peuvent consulter la publication "Permis de bâtir", no de catalogue 64-001.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'unité de logement". Pour toute période donnée,

the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling units are; each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversion". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boat-houses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwelling structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into

l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans oublier à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tous plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome appartenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajus-

account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with
Tabulations Presented in this Report

The 1971 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

tements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement
avec ceux du présent rapport

Le recensement de 1971 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simple détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1971 Census are not enumerated in the Starts and Completions Survey.

Autrement dit, cette catégorie inclus:

- (i) les duplex jumelés.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1971 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

(1) In this table, metropolitan areas, large urban areas and other urban areas include data corresponding to the agglomerates and localities shown in Table M-7 to M-14 inclusive. These tables include housebuilding activity in the urbanized fringe areas even though these areas are under 10,000 population. For classification purposes, metropolitan areas are agglomerations of more than 100,000 population; large urban areas are agglomerations and localities of 40,000 to 100,000 population; other urban areas are agglomeration and localities of 10,000 to 40,000 population. — Dans ce tableau, les zones métropolitaines, les grandes agglomérations, les autres agglomérations et localités urbaines incluent les données correspondant aux zones telles que présentées dans les Tableaux M-7 à M-14 inclusivement; ces tableaux comprennent la construction domiciliaire dans les banlieues même si celles-ci ont une population inférieure à 10,000 habitants. Pour fins de classification, les zones métropolitaines sont des agglomérations de plus de 100,000 habitants; les grandes agglomérations sont des zones urbaines de 40,000 à 100,000 habitants, les autres zones urbaines sont des agglomérations et localités urbaines de 10,000 à 40,000 habitants.

March -- 1973 -- Mars

(Urban agglomerates and Urban centres
of 10,000 population and over)(Agglomérations et localités urbaines
de 10,000 habitants et plus)IntroductionIntroduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan areas, urban agglomerates and urban centres of 10,000 population and over, as defined by the 1971 Census are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year, at the end of March, June, September and December.

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, agglomérations urbaines et localités urbaines de 10,000 habitants et plus, telles que définies pour les fins du recensement de 1971, font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q, available only for the centres of 10,000 population and over (including the Metropolitan areas and other urban agglomerates). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, quarterly tables follow monthly tables.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 10,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux trimestriels suivent les tableaux mensuels.

PublicationPublication

Regular users of the statistical series of starts and completions will notice changes in the presentation of the data from the 1972 publications. This publication contains information on starts and completions in urban agglomerates and centres of 10,000 population and over as defined by the 1971 Census. In the 1971 Census, the concept of "census agglomerate" is somewhat broader than the previous 1966 Census definition of "urban area". In 1966, the population of what is equivalent to a census agglomeration was strictly urban. In 1971, complete rural municipalities are included in the Census Agglomerate provided the urban part of these municipalities constitutes with the main urban centre a continuous built-up area with no separation greater than one mile from the main urban centre. Metropolitan Areas, Large Urban Agglomerates and other Census Agglomerates may therefore contain fringe localities of less than 10,000 urban population.

Les usagers de la série des mises en chantier et des achèvements remarqueront des changements dans la présentation des données comparativement à celles fournies dans les publications de 1972. Le présent rapport contient des données sur les mises en chantier et les achèvements dans les agglomérations et les localités urbaines de 10,000 habitants et plus, telles qu'établies aux fins du recensement de 1971. Dans le recensement de 1971, le concept "d'agglomération urbaine" a été élargi par rapport à la notion de "zone urbaine" de 1966. En 1966, la population des agglomérations de recensement était strictement urbaine. En 1971, des municipalités rurales entières sont comprises dans les agglomérations de recensement pourvu que la partie urbaine de ces municipalités forme avec un centre urbain d'importance une zone habitée continue. Les zones métropolitaines, les grandes agglomérations et les autres agglomérations urbaines peuvent donc contenir des banlieux qui soient inférieures à 10,000 habitants.

If users are interested in monthly housing data for municipalities that do not meet the definition of an urban agglomerate of 10,000 population and over as defined for the purpose of the starts and completions survey, they may refer to the monthly publication "Building Permits", catalogue no. 64-001.

Si les usagers veulent obtenir des données de la construction domiciliaire pour les municipalités autres que les agglomérations et localités urbaines de 10,000 habitants et plus, ils peuvent consulter la publication "Permis de bâtir", no de catalogue 64-001.

DefinitionsDéfinitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'unité de logement". Pour toute période donnée,

the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling units are; each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversion". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boat-houses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwelling structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into

l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tous plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitenciaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajus-

account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with
Tabulations Presented in this Report

The 1971 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

tements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement
avec ceux du présent rapport

Le recensement de 1971 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logement d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenant. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simple détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1971 Census are not enumerated in the Starts and Completions Survey.

Autrement dit, cette catégorie inclus:

- (i) les duplex jumelés.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1971 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

(1) In this table, metropolitan areas, large urban areas and other urban areas include data corresponding to the agglomerates and localities shown in Table M-7 to M-14 inclusive. These tables include housebuilding activity in the urbanized fringe areas even though these areas are under 10,000 population. For classification purposes, metropolitan areas are agglomerations of more than 100,000 population; large urban areas are agglomerations and localities of 40,000 to 100,000 population; other urban areas are agglomeration and localities of 10,000 to 40,000 population. - Dans ce tableau, les zones métropolitaines, les grandes agglomérations, les autres agglomérations et localités urbaines incluent les données correspondant aux zones telles que présentées dans les Tableaux M-7 à M-14 inclusivement; ces tableaux comprennent la construction domiciliaire dans les banlieues même si celles-ci ont une population inférieure à 10,000 habitants. Pour fins de classification, les zones métropolitaines sont des agglomérations de plus de 100,000 habitants; les grandes agglomérations sont des zones urbaines de 40,000 à 100,000 habitants; les autres zones urbaines sont des agglomérations et localités urbaines de 10,000 à 40,000 habitants.

APRIL - 1973- AVRIL

(Urban agglomerates and Urban centres
of 10,000 population and over)

(Agglomérations et localités urbaines
de 10,000 habitants et plus)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan areas, urban agglomerates and urban centres of 10,000 population and over, as defined by the 1971 Census are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year, at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q, available only for the centres of 10,000 population and over (including the Metropolitan areas and other urban agglomerates). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, quarterly tables follow monthly tables.

Publication

Regular users of the statistical series of starts and completions will notice changes in the presentation of the data from the 1972 publications. This publication contains information on starts and completions in urban agglomerates and centres of 10,000 population and over as defined by the 1971 Census. In the 1971 Census, the concept of "census agglomerate" is somewhat broader than the previous 1966 Census definition of "urban area". In 1966, the population of what is equivalent to a census agglomeration was strictly urban. In 1971, complete rural municipalities are included in the Census Agglomerate provided the urban part of these municipalities constitutes with the main urban centre a continuous built-up area with no separation greater than one mile from the main urban centre. Metropolitan Areas, Large Urban Agglomerates and other Census Agglomerates may therefore contain fringe localities of less than 10,000 urban population.

If users are interested in monthly housing data for municipalities that do not meet the definition of an urban agglomerate of 10,000 population and over as defined for the purpose of the starts and completions survey, they may refer to the monthly publication "Building Permits", catalogue no. 64-001.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, agglomérations urbaines et localités urbaines de 10,000 habitants et plus, telles que définies pour les fins du recensement de 1971, font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 10,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux trimestriels suivent les tableaux mensuels.

Publication

Les usagers de la série des mises en chantier et des achèvements remarqueront des changements dans la présentation des données comparativement à celles fournies dans les publications de 1972. Le présent rapport contient des données sur les mises en chantier et les achèvements dans les agglomérations et les localités urbaines de 10,000 habitants et plus, telles qu'établies aux fins du recensement de 1971. Dans le recensement de 1971, le concept "d'agglomération urbaine" a été élargi par rapport à la notion de "zone urbaine" de 1966. En 1966, la population des agglomérations de recensement était strictement urbaine. En 1971, des municipalités rurales entières sont comprises dans les agglomérations de recensement pourvu que la partie urbaine de ces municipalités forme avec un centre urbain d'importance une zone habitée continue. Les zones métropolitaines, les grandes agglomérations et les autres agglomérations urbaines peuvent donc contenir des banlieux qui soient inférieures à 10,000 habitants.

Si les usagers veulent obtenir des données de la construction domiciliaire pour les municipalités autres que les agglomérations et localités urbaines de 10,000 habitants et plus, ils peuvent consulter la publication "Permis de bâtir", no de catalogue 64-001.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'unité de logement". Pour toute période donnée,

the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling units are; each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversion". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boat-houses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwelling structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into

l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tous plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajus-

account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with
Tabulations Presented in this Report

The 1971 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

tements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement
avec ceux du présent rapport

Le recensement de 1971 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simple détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1971 Census are not enumerated in the Starts and Completions Survey.

Autrement dit, cette catégorie inclus:

- (i) les duplex jumelés.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1971 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

Alphabetical Index of Localities Covered by the
Monthly Starts and Completions Survey.

(1) In this table, metropolitan areas, large urban areas and other urban areas include data corresponding to the agglomerates and localities shown in Table M-7 to M-14 inclusive. These tables include housebuilding activity in the urbanized fringe areas even though these areas are under 10,000 population. For classification purposes, metropolitan areas are agglomerations of more than 100,000 population; large urban areas are agglomerations and localities of 40,000 to 100,000 population; other urban areas are agglomeration and localities of 10,000 to 40,000 population. - Dans ce tableau, les zones métropolitaines, les grandes agglomérations, les autres agglomérations et localités urbaines incluent les données correspondant aux zones telles que présentées dans les Tableaux M-7 à M-14 inclusivement; ces tableaux comprennent la construction domiciliaire dans les banlieues même si celles-ci ont une population inférieure à 10,000 habitants. Pour fins de classification, les zones métropolitaines sont des agglomérations de plus de 100,000 habitants; les grandes agglomérations sont des zones urbaines de 40,000 à 100,000 habitants, les autres zones urbaines sont des agglomérations et localités urbaines de 10,000 à 40,000 habitants.

MAY - 1973 - MAI

(Urban agglomerates and Urban centres
of 10,000 population and over)(Agglomérations et localités urbaines
de 10,000 habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan areas, urban agglomerates and urban centres of 10,000 population and over, as defined by the 1971 Census are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year, at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q, available only for the centres of 10,000 population and over (including the Metropolitan areas and other urban agglomerates). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, quarterly tables follow monthly tables.

Publication

Regular users of the statistical series of starts and completions will notice changes in the presentation of the data from the 1972 publications. This publication contains information on starts and completions in urban agglomerates and centres of 10,000 population and over as defined by the 1971 Census. In the 1971 Census, the concept of "census agglomerate" is somewhat broader than the previous 1966 Census definition of "urban area". In 1966, the population of what is equivalent to a census agglomeration was strictly urban. In 1971, complete rural municipalities are included in the Census Agglomeration provided the urban part of these municipalities constitutes with the main urban centre a continuous built-up area with no separation greater than one mile from the main urban centre. Metropolitan Areas, Large Urban Agglomerates and other Census Agglomerates may therefore contain fringe localities of less than 10,000 urban population.

If users are interested in monthly housing data for municipalities that do not meet the definition of an urban agglomerate of 10,000 population and over as defined for the purpose of the starts and completions survey, they may refer to the monthly publication "Building Permits", catalogue no. 64-001.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, agglomérations urbaines et localités urbaines de 10,000 habitants et plus, telles que définies pour les fins du recensement de 1971, font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 10,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux trimestriels suivent les tableaux mensuels.

Publication

Les usagers de la série des mises en chantier et des achèvements remarqueront des changements dans la présentation des données comparativement à celles fournies dans les publications de 1972. Le présent rapport contient des données sur les mises en chantier et les achèvements dans les agglomérations et les localités urbaines de 10,000 habitants et plus, telles qu'établies aux fins du recensement de 1971. Dans le recensement de 1971, le concept "d'agglomération urbaine" a été élargi par rapport à la notion de "zone urbaine" de 1966. En 1966, la population des agglomérations de recensement était strictement urbaine. En 1971, des municipalités rurales entières sont comprises dans les agglomérations de recensement pourvu que la partie urbaine de ces municipalités forme avec un centre urbain d'importance une zone habitée continue. Les zones métropolitaines, les grandes agglomérations et les autres agglomérations urbaines peuvent donc contenir des banlieux qui soient inférieures à 10,000 habitants.

Si les usagers veulent obtenir des données de la construction domiciliaire pour les municipalités autres que les agglomérations et localités urbaines de 10,000 habitants et plus, ils peuvent consulter la publication "Permis de bâtir", no de catalogue 64-001.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'unité de logement". Pour toute période donnée,

the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling units are; each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversion". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boat-houses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwelling structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into

l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tous plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajus-

account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with
Tabulations Presented in this Report

The 1971 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

tements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement
avec ceux du présent rapport

Le recensement de 1971 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simple détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1971 Census are not enumerated in the Starts and Completions Survey.

Autrement dit, cette catégorie inclus:

- (i) les duplex jumelés.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1971 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

(1) In this table, metropolitan areas, large urban areas and other urban areas include data corresponding to the agglomerates and localities shown in Table M-7 to M-14 inclusive. These tables include housebuilding activity in the urbanized fringe areas even though these areas are under 10,000 population. For classification purposes, metropolitan areas are agglomerations of more than 100,000 population; large urban areas are agglomerations and localities of 40,000 to 100,000 population; other urban areas are agglomeration and localities of 10,000 to 40,000 population. - Dans ce tableau, les zones métropolitaines, les grandes agglomérations, les autres agglomérations et localités urbaines incluent les données correspondant aux zones telles que présentées dans les Tableaux M-7 à M-14 inclusivement; ces tableaux comprennent la construction domiciliaire dans les banlieues même si celles-ci ont une population inférieure à 10,000 habitants. Pour fins de classification, les zones métropolitaines sont des agglomérations de plus de 100,000 habitants; les grandes agglomérations sont des zones urbaines de 40,000 à 100,000 habitants, les autres zones urbaines sont des agglomérations et localités urbaines de 10,000 à 40,000 habitants.

JUNE - 1973 - JUIN

(Urban agglomerates and Urban centres
of 10,000 population and over)

(Agglomérations et localités urbaines
de 10,000 habitants et plus)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan areas, urban agglomerates and urban centres of 10,000 population and over, as defined by the 1971 Census are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year, at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q, available only for the centres of 10,000 population and over (including the Metropolitan areas and other urban agglomerates). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, quarterly tables follow monthly tables.

Publication

Regular users of the statistical series of starts and completions will notice changes in the presentation of the data from the 1972 publications. This publication contains information on starts and completions in urban agglomerates and centres of 10,000 population and over as defined by the 1971 Census. In the 1971 Census, the concept of "census agglomerate" is somewhat broader than the previous 1966 Census definition of "urban area". In 1966, the population of what is equivalent to a census agglomeration was strictly urban. In 1971, complete rural municipalities are included in the Census Agglomerate provided the urban part of these municipalities constitutes with the main urban centre a continuous built-up area with no separation greater than one mile from the main urban centre. Metropolitan Areas, Large Urban Agglomerates and other Census Agglomerates may therefore contain fringe localities of less than 10,000 urban population.

If users are interested in monthly housing data for municipalities that do not meet the definition of an urban agglomerate of 10,000 population and over as defined for the purpose of the starts and completions survey, they may refer to the monthly publication "Building Permits", catalogue no. 64-001.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, agglomérations urbaines et localités urbaines de 10,000 habitants et plus, telles que définies pour les fins du recensement de 1971, font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 10,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux trimestriels suivent les tableaux mensuels.

Publication

Les usagers de la série des mises en chantier et des achevements remarqueront des changements dans la présentation des données comparativement à celles fournies dans les publications de 1972. Le présent rapport contient des données sur les mises en chantier et les achevements dans les agglomérations et les localités urbaines de 10,000 habitants et plus, telles qu'établies aux fins du recensement de 1971. Dans le recensement de 1971, le concept "d'agglomération urbaine" a été élargi par rapport à la notion de "zone urbaine" de 1966. En 1966, la population des agglomérations de recensement était strictement urbaine. En 1971, des municipalités rurales entières sont comprises dans les agglomérations de recensement pourvu que la partie urbaine de ces municipalités forme avec un centre urbain d'importance une zone habitée continue. Les zones métropolitaines, les grandes agglomérations et les autres agglomérations urbaines peuvent donc contenir des banlieux qui soient inférieures à 10,000 habitants.

Si les usagers veulent obtenir des données de la construction domiciliaire pour les municipalités autres que les agglomérations et localités urbaines de 10,000 habitants et plus, ils peuvent consulter la publication "Permis de bâtir", no de catalogue 64-001.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'unité de logement". Pour toute période donnée,

the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling units are; each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversion". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boat-houses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwelling structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into

l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tous plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empanchement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empanchement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajus-

account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with
Tabulations Presented in this Report

The 1971 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

tements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement
avec ceux du présent rapport

Le recensement de 1971 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenante à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simple détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1971 Census are not enumerated in the Starts and Completions Survey.

Autrement dit, cette catégorie inclus:

- (i) les duplex jumelés.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1971 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

(1) In this table, metropolitan areas, large urban areas and other urban areas include data corresponding to the agglomerates and localities shown in Table M-7 to M-14 inclusive. These tables include housebuilding activity in the urbanized fringe areas even though these areas are under 10,000 population. For classification purposes, metropolitan areas are agglomerations of more than 100,000 population; large urban areas are agglomerations and localities of 40,000 to 100,000 population; other urban areas are agglomeration and localities of 10,000 to 40,000 population. - Dans ce tableau, les zones métropolitaines, les grandes agglomérations, les autres agglomérations et localités urbaines incluent les données correspondant aux zones telles que présentées dans les Tableaux M-7 à M-14 inclusivement; ces tableaux comprennent la construction domiciliaire dans les banlieues même si celles-ci ont une population inférieure à 10,000 habitants. Pour fins de classification, les zones métropolitaines sont des agglomérations de plus de 100,000 habitants; les grandes agglomérations sont des zones urbaines de 40,000 à 100,000 habitants, les autres zones urbaines sont des agglomérations et localités urbaines de 10,000 à 40,000 habitants.

JULY - 1973 - JUILLET

(Urban agglomerates and Urban centres
of 10,000 population and over)(Agglomérations et localités urbaines
de 10,000 habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan areas, urban agglomerates and urban centres of 10,000 population and over, as defined by the 1971 Census are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year, at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q, available only for the centres of 10,000 population and over (including the Metropolitan areas and other urban agglomerates). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, quarterly tables follow monthly tables.

Publication

Regular users of the statistical series of starts and completions will notice changes in the presentation of the data from the 1972 publications. This publication contains information on starts and completions in urban agglomerates and centres of 10,000 population and over as defined by the 1971 Census. In the 1971 Census, the concept of "census agglomerate" is somewhat broader than the previous 1966 Census definition of "urban area". In 1966, the population of what is equivalent to a census agglomeration was strictly urban. In 1971, complete rural municipalities are included in the Census Agglomerate provided the urban part of these municipalities constitutes with the main urban centre a continuous built-up area with no separation greater than one mile from the main urban centre. Metropolitan Areas, Large Urban Agglomerates and other Census Agglomerates may therefore contain fringe localities of less than 10,000 urban population.

If users are interested in monthly housing data for municipalities that do not meet the definition of an urban agglomerate of 10,000 population and over as defined for the purpose of the starts and completions survey, they may refer to the monthly publication "Building Permits", catalogue no. 64-001.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, agglomérations urbaines et localités urbaines de 10,000 habitants et plus, telles que définies pour les fins du recensement de 1971, font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 10,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux trimestriels suivent les tableaux mensuels.

Publication

Les usagers de la série des mises en chantier et des achèvements remarqueront des changements dans la présentation des données comparativement à celles fournies dans les publications de 1972. Le présent rapport contient des données sur les mises en chantier et les achèvements dans les agglomérations et les localités urbaines de 10,000 habitants et plus, telles qu'établies aux fins du recensement de 1971. Dans le recensement de 1971, le concept "d'agglomération urbaine" a été élargi par rapport à la notion de "zone urbaine" de 1966. En 1966, la population des agglomérations de recensement était strictement urbaine. En 1971, des municipalités rurales entières sont comprises dans les agglomérations de recensement pourvu que la partie urbaine de ces municipalités forme avec un centre urbain d'importance une zone habitée continue. Les zones métropolitaines, les grandes agglomérations et les autres agglomérations urbaines peuvent donc contenir des banlieux qui soient inférieures à 10,000 habitants.

Si les usagers veulent obtenir des données de la construction domiciliaire pour les municipalités autres que les agglomérations et localités urbaines de 10,000 habitants et plus, ils peuvent consulter la publication "Permis de bâtir", no de catalogue 64-001.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'unité de logement". Pour toute période donnée,

the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling units are; each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversion". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boat-houses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwelling structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into

l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tous plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'emplacement est installé, c'est-à-dire lorsque le béton a été coulé dans l'emplacement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajus-

account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with
Tabulations Presented in this Report

The 1971 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

tements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement
avec ceux du présent rapport

Le recensement de 1971 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simple attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simple attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simple détachés.
2. Bi-familiaux: qui comprennent les simple attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simple attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

Autrement dit, cette catégorie inclus:

- (i) les duplex jumelés.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

As mentioned earlier Mobile dwellings although covered by the 1971 Census are not enumerated in the Starts and Completions Survey.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1971 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

(1) In this table, metropolitan areas, large urban areas and other urban areas include data corresponding to the agglomerates and localities shown in Table M-7 to M-14 inclusive. These tables include housebuilding activity in the urbanized fringe areas even though these areas are under 10,000 population. For classification purposes, metropolitan areas are agglomerations of more than 100,000 population; large urban areas are agglomerations and localities of 40,000 to 100,000 population; other urban areas are agglomeration and localities of 10,000 to 40,000 population. - Dans ce tableau, les zones métropolitaines, les grandes agglomérations, les autres agglomérations et localités urbaines incluent les données correspondant aux zones telles que présentées dans les Tableaux M-7 à M-14 inclusivement; ces tableaux comprennent la construction domiciliaire dans les banlieues même si celles-ci ont une population inférieure à 10,000 habitants. Pour fins de classification, les zones métropolitaines sont des agglomérations de plus de 100,000 habitants; les grandes agglomérations sont des zones urbaines de 40,000 à 100,000 habitants, les autres zones urbaines sont des agglomérations et localités urbaines de 10,000 à 40,000 habitants.

AUGUST - 1973 - AOUT

(Urban agglomerates and Urban centres
of 10,000 population and over)

(Agglomérations et localités urbaines
de 10,000 habitants et plus)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan areas, urban agglomerates and urban centres of 10,000 population and over, as defined by the 1971 Census are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year, at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q, available only for the centres of 10,000 population and over (including the Metropolitan areas and other urban agglomerates). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, quarterly tables follow monthly tables.

Publication

Regular users of the statistical series of starts and completions will notice changes in the presentation of the data from the 1972 publications. This publication contains information on starts and completions in urban agglomerates and centres of 10,000 population and over as defined by the 1971 Census. In the 1971 Census, the concept of "census agglomerate" is somewhat broader than the previous 1966 Census definition of "urban area". In 1966, the population of what is equivalent to a census agglomeration was strictly urban. In 1971, complete rural municipalities are included in the Census Agglomerate provided the urban part of these municipalities constitutes with the main urban centre a continuous built-up area with no separation greater than one mile from the main urban centre. Metropolitan Areas, Large Urban Agglomerates and other Census Agglomerates may therefore contain fringe localities of less than 10,000 urban population.

If users are interested in monthly housing data for municipalities that do not meet the definition of an urban agglomerate of 10,000 population and over as defined for the purpose of the starts and completions survey, they may refer to the monthly publication "Building Permits", catalogue no. 64-001.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, agglomérations urbaines et localités urbaines de 10,000 habitants et plus, telles que définies pour les fins du recensement de 1971, font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 10,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux trimestriels suivent les tableaux mensuels.

Publication

Les usagers de la série des mises en chantier et des achèvements remarqueront des changements dans la présentation des données comparativement à celles fournies dans les publications de 1972. Le présent rapport contient des données sur les mises en chantier et les achèvements dans les agglomérations et les localités urbaines de 10,000 habitants et plus, telles qu'établies aux fins du recensement de 1971. Dans le recensement de 1971, le concept "d'agglomération urbaine" a été élargi par rapport à la notion de "zone urbaine" de 1966. En 1966, la population des agglomérations de recensement était strictement urbaine. En 1971, des municipalités rurales entières sont comprises dans les agglomérations de recensement pourvu que la partie urbaine de ces municipalités forme avec un centre urbain d'importance une zone habitée continue. Les zones métropolitaines, les grandes agglomérations et les autres agglomérations urbaines peuvent donc contenir des banlieux qui soient inférieures à 10,000 habitants.

Si les usagers veulent obtenir des données de la construction domiciliaire pour les municipalités autres que les agglomérations et localités urbaines de 10,000 habitants et plus, ils peuvent consulter la publication "Permis de bâtir", no de catalogue 64-001.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'unité de logement". Pour toute période donnée,

the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling units are; each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversion". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boat-houses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwelling structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into

l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tous plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajus-

account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with
Tabulations Presented in this Report

The 1971 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

tements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement
avec ceux du présent rapport

Le recensement de 1971 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenant. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simple détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1971 Census are not enumerated in the Starts and Completions Survey.

Autrement dit, cette catégorie inclus:

- (i) les duplex jumelés.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles dont le recensement de 1971 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

(1) In this table, metropolitan areas, large urban areas and other urban areas include data corresponding to the agglomerates and localities shown in Table M-7 to M-14 inclusive. These tables include housebuilding activity in the urbanized fringe areas even though these areas are under 10,000 population. For classification purposes, metropolitan areas are agglomerations of more than 100,000 population; large urban areas are agglomerations and localities of 40,000 to 100,000 population; other urban areas are agglomeration and localities of 10,000 to 40,000 population. - Dans ce tableau, les zones métropolitaines, les grandes agglomérations, les autres agglomérations et localités urbaines incluent les données correspondant aux zones telles que présentées dans les Tableaux M-7 à M-14 inclusivement; ces tableaux comprennent la construction domiciliaire dans les banlieues même si celles-ci ont une population inférieure à 10,000 habitants. Pour fins de classification, les zones métropolitaines sont des agglomérations de plus de 100,000 habitants; les grandes agglomérations sont des zones urbaines de 40,000 à 100,000 habitants, les autres zones urbaines sont des agglomérations et localités urbaines de 10,000 à 40,000 habitants.

SEPTEMBER - 1973 - SEPTEMBRE

(Urban agglomerates and Urban centres
of 10,000 population and over)

(Agglomérations et localités urbaines
de 10,000 habitants et plus)

Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan areas, urban agglomerates and urban centres of 10,000 population and over, as defined by the 1971 Census are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year, at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q, available only for the centres of 10,000 population and over (including the Metropolitan areas and other urban agglomerates). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, quarterly tables follow monthly tables.

Publication

Regular users of the statistical series of starts and completions will notice changes in the presentation of the data from the 1972 publications. This publication contains information on starts and completions in urban agglomerates and centres of 10,000 population and over as defined by the 1971 Census. In the 1971 Census, the concept of "census agglomerate" is somewhat broader than the previous 1966 Census definition of "urban area". In 1966, the population of what is equivalent to a census agglomeration was strictly urban. In 1971, complete rural municipalities are included in the Census Agglomerate provided the urban part of these municipalities constitutes with the main urban centre a continuous built-up area with no separation greater than one mile from the main urban centre. Metropolitan Areas, Large Urban Agglomerates and other Census Agglomerates may therefore contain fringe localities of less than 10,000 urban population.

If users are interested in monthly housing data for municipalities that do not meet the definition of an urban agglomerate of 10,000 population and over as defined for the purpose of the starts and completions survey, they may refer to the monthly publication "Building Permits", catalogue no. 64-001.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, agglomérations urbaines et localités urbaines de 10,000 habitants et plus, telles que définies pour les fins du recensement de 1971, font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 10,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux trimestriels suivent les tableaux mensuels.

Publication

Les usagers de la série des mises en chantier et des achèvements remarqueront des changements dans la présentation des données comparativement à celles fournies dans les publications de 1972. Le présent rapport contient des données sur les mises en chantier et les achèvements dans les agglomérations et les localités urbaines de 10,000 habitants et plus, telles qu'établies aux fins du recensement de 1971. Dans le recensement de 1971, le concept "d'agglomération urbaine" a été élargi par rapport à la notion de "zone urbaine" de 1966. En 1966, la population des agglomérations de recensement était strictement urbaine. En 1971, des municipalités rurales entières sont comprises dans les agglomérations de recensement pourvu que la partie urbaine de ces municipalités forme avec un centre urbain d'importance une zone habitée continue. Les zones métropolitaines, les grandes agglomérations et les autres agglomérations urbaines peuvent donc contenir des banlieux qui soient inférieures à 10,000 habitants.

Si les usagers veulent obtenir des données de la construction domiciliaire pour les municipalités autres que les agglomérations et localités urbaines de 10,000 habitants et plus, ils peuvent consulter la publication "Permis de bâtir", no de catalogue 64-001.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'unité de logement". Pour toute période donnée,

the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling units are; each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversion". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boat-houses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwelling structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into

l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tous plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajus-

account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with
Tabulations Presented in this Report

The 1971 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

tements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement
avec ceux du présent rapport

Le recensement de 1971 classe les données relatives au stock de logements d'après les catégories suivantes:

Simplex détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simplex attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenant. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simplex détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1971 Census are not enumerated in the Starts and Completions Survey.

Autrement dit, cette catégorie inclut:

- (i) les duplex jumelés.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1971 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

(1) In this table, metropolitan areas, large urban areas and other urban areas include data corresponding to the agglomerates and localities shown in Table M-7 to M-14 inclusive. These tables include housebuilding activity in the urbanized fringe areas even though these areas are under 10,000 population. For classification purposes, metropolitan areas are agglomerations of more than 100,000 population; large urban areas are agglomerations and localities of 40,000 to 100,000 population; other urban areas are agglomeration and localities of 10,000 to 40,000 population. — Dans ce tableau, les zones métropolitaines, les grandes agglomérations, les autres agglomérations et localités urbaines incluent les données correspondant aux zones telles que présentées dans les Tableaux M-7 à M-14 inclusivement; ces tableaux comprennent la construction domiciliaire dans les banlieues même si celles-ci ont une population inférieure à 10,000 habitants. Pour fins de classification, les zones métropolitaines sont des agglomérations de plus de 100,000 habitants; les grandes agglomérations sont des zones urbaines de 40,000 à 100,000 habitants, les autres zones urbaines sont des agglomérations et localités urbaines de 10,000 à 40,000 habitants.

OCTOBER — 1973 — OCTOBRE

(Urban agglomerates and Urban centres
of 10,000 population and over)(Agglomérations et localités urbaines
de 10,000 habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan areas, urban agglomerates and urban centres of 10,000 population and over, as defined by the 1971 Census are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year, at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q, available only for the centres of 10,000 population and over (including the Metropolitan areas and other urban agglomerates). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, quarterly tables follow monthly tables.

Publication

Regular users of the statistical series of starts and completions will notice changes in the presentation of the data from the 1972 publications. This publication contains information on starts and completions in urban agglomerates and centres of 10,000 population and over as defined by the 1971 Census. In the 1971 Census, the concept of "census agglomerate" is somewhat broader than the previous 1966 Census definition of "urban area". In 1966, the population of what is equivalent to a census agglomeration was strictly urban. In 1971, complete rural municipalities are included in the Census Agglomeration provided the urban part of these municipalities constitutes with the main urban centre a continuous built-up area with no separation greater than one mile from the main urban centre. Metropolitan Areas, Large Urban Agglomerates and other Census Agglomerates may therefore contain fringe localities of less than 10,000 urban population.

If users are interested in monthly housing data for municipalities that do not meet the definition of an urban agglomeration of 10,000 population and over as defined for the purpose of the starts and completions survey, they may refer to the monthly publication "Building Permits", catalogue no. 64-001.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, agglomérations urbaines et localités urbaines de 10,000 habitants et plus, telles que définies pour les fins du recensement de 1971, font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 10,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux trimestriels suivent les tableaux mensuels.

Publication

Les usagers de la série des mises en chantier et des achèvements remarqueront des changements dans la présentation des données comparativement à celles fournies dans les publications de 1972. Le présent rapport contient des données sur les mises en chantier et les achèvements dans les agglomérations et les localités urbaines de 10,000 habitants et plus, telles qu'établies aux fins du recensement de 1971. Dans le recensement de 1971, le concept "d'agglomération urbaine" a été élargi par rapport à la notion de "zone urbaine" de 1966. En 1966, la population des agglomérations de recensement était strictement urbaine. En 1971, des municipalités rurales entières sont comprises dans les agglomérations de recensement pourvu que la partie urbaine de ces municipalités forme avec un centre urbain d'importance une zone habitée continue. Les zones métropolitaines, les grandes agglomérations et les autres agglomérations urbaines peuvent donc contenir des banlieux qui soient inférieures à 10,000 habitants.

Si les usagers veulent obtenir des données de la construction domiciliaire pour les municipalités autres que les agglomérations et localités urbaines de 10,000 habitants et plus, ils peuvent consulter la publication "Permis de bâtir", no de catalogue 64-001.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'unité de logement". Pour toute période donnée,

the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling units are; each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversion". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boat-houses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwelling structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into

l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tous plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitenciaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajus-

account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with
Tabulations Presented in this Report

The 1971 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

tements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement
avec ceux du présent rapport

Le recensement de 1971 classe les données relatives au stock de logements d'après les catégories suivantes:

Simple détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simple attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenant. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simple détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1971 Census are not enumerated in the Starts and Completions Survey.

Autrement dit, cette catégorie inclut:

- (i) les duplex jumelés.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1971 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

(1) In this table, metropolitan areas, large urban areas and other urban areas include data corresponding to the agglomerates and localities shown in Table M-7 to M-14 inclusive. These tables include housebuilding activity in the urbanized fringe areas even though these areas are under 10,000 population. For classification purposes, metropolitan areas are agglomerations of more than 100,000 population; large urban areas are agglomerations and localities of 40,000 to 100,000 population; other urban areas are agglomeration and localities of 10,000 to 40,000 population. - Dans ce tableau, les zones métropolitaines, les grandes agglomérations, les autres agglomérations et localités urbaines incluent les données correspondant aux zones telles que présentées dans les Tableaux M-7 à M-14 inclusivement; ces tableaux comprennent la construction domiciliaire dans les banlieues même si celles-ci ont une population inférieure à 10,000 habitants. Pour fins de classification, les zones métropolitaines sont des agglomérations de plus de 100,000 habitants; les grandes agglomérations sont des zones urbaines de 40,000 à 100,000 habitants, les autres zones urbaines sont des agglomérations et localités urbaines de 10,000 à 40,000 habitants.

NOVEMBER -- 1973 -- NOVEMBRE

(Urban agglomerates and Urban centres
of 10,000 population and over)(Agglomérations et localités urbaines
de 10,000 habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan areas, urban agglomerates and urban centres of 10,000 population and over, as defined by the 1971 Census are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year, at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q, available only for the centres of 10,000 population and over (including the Metropolitan areas and other urban agglomerates). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, quarterly tables follow monthly tables.

Publication

Regular users of the statistical series of starts and completions will notice changes in the presentation of the data from the 1972 publications. This publication contains information on starts and completions in urban agglomerates and centres of 10,000 population and over as defined by the 1971 Census. In the 1971 Census, the concept of "census agglomeration" is somewhat broader than the previous 1966 Census definition of "urban area". In 1966, the population of what is equivalent to a census agglomeration was strictly urban. In 1971, complete rural municipalities are included in the Census Agglomeration provided the urban part of these municipalities constitutes with the main urban centre a continuous built-up area with no separation greater than one mile from the main urban centre. Metropolitan Areas, Large Urban Agglomerates and other Census Agglomerates may therefore contain fringe localities of less than 10,000 urban population.

If users are interested in monthly housing data for municipalities that do not meet the definition of an urban agglomeration of 10,000 population and over as defined for the purpose of the starts and completions survey, they may refer to the monthly publication "Building Permits", catalogue no. 64-001.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, agglomérations urbaines et localités urbaines de 10,000 habitants et plus, telles que définies pour les fins du recensement de 1971, font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 10,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux trimestriels suivent les tableaux mensuels.

Publication

Les usagers de la série des mises en chantier et des achèvements remarqueront des changements dans la présentation des données comparativement à celles fournies dans les publications de 1972. Le présent rapport contient des données sur les mises en chantier et les achèvements dans les agglomérations et les localités urbaines de 10,000 habitants et plus, telles qu'établies aux fins du recensement de 1971. Dans le recensement de 1971, le concept "d'agglomération urbaine" a été élargi par rapport à la notion de "zone urbaine" de 1966. En 1966, la population des agglomérations de recensement était strictement urbaine. En 1971, des municipalités rurales entières sont comprises dans les agglomérations de recensement pourvu que la partie urbaine de ces municipalités forme avec un centre urbain d'importance une zone habitée continue. Les zones métropolitaines, les grandes agglomérations et les autres agglomérations urbaines peuvent donc contenir des banlieux qui soient inférieures à 10,000 habitants.

Si les usagers veulent obtenir des données de la construction domiciliaire pour les municipalités autres que les agglomérations et localités urbaines de 10,000 habitants et plus, ils peuvent consulter la publication "Permis de bâtir", no de catalogue 64-001.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'unité de logement". Pour toute période donnée,

the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling units are; each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversion". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boat-houses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwelling structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into

l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tous plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajouts-

account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

tements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparison of Census Tabulations with
Tabulations Presented in this Report

The 1971 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

Comparaison des calculs du recensement
avec ceux du présent rapport

Le recensement de 1971 classe les données relatives au stock de logements d'après les catégories suivantes:

Simplex détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simplex attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logements d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simplex détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1971 Census are not enumerated in the Starts and Completions Survey.

Autrement dit, cette catégorie inclus:

- (i) les duplex jumelés.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1971 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

(1) In this table, metropolitan areas, large urban areas and other urban areas include data corresponding to the agglomerates and localities shown in Table M-7 to M-14 inclusive. These tables include housebuilding activity in the urbanized fringe areas even though these areas are under 10,000 population. For classification purposes, metropolitan areas are agglomerations of more than 100,000 population; large urban areas are agglomerations and localities of 40,000 to 100,000 population; other urban areas are agglomeration and localities of 10,000 to 40,000 population. — Dans ce tableau, les zones métropolitaines, les grandes agglomérations, les autres agglomérations et localités urbaines incluent les données correspondant aux zones telles que présentées dans les Tableaux M-7 à M-14 inclusivement; ces tableaux comprennent la construction domiciliaire dans les banlieues même si celles-ci ont une population inférieure à 10,000 habitants. Pour fins de classification, les zones métropolitaines sont des agglomérations de plus de 100,000 habitants; les grandes agglomérations sont des zones urbaines de 40,000 à 100,000 habitants, les autres zones urbaines sont des agglomérations et localités urbaines de 10,000 à 40,000 habitants.

DECEMBER - 1973 - DÉCEMBRE

(Urban agglomerates and Urban centres
of 10,000 population and over)(Agglomérations et localités urbaines
de 10,000 habitants et plus)Introduction

The statistics contained in this report are the results of nation-wide surveys carried out by the Central Mortgage and Housing Corporation. All Metropolitan areas, urban agglomerates and urban centres of 10,000 population and over, as defined by the 1971 Census are enumerated completely each month. The remainder of the country is covered on a sample basis four times a year, at the end of March, June, September and December.

The reports for March, June, September and December contain statistics referring to all areas. The tables in the reports for these months containing data for all areas carry a number preceded by the letter Q, available only for the centres of 10,000 population and over (including the Metropolitan areas and other urban agglomerates). Tables containing data for these centres are identified by a number preceded by the letter M, and appear in all the reports for the 12 months. In the reports containing quarterly data for all areas, quarterly tables follow monthly tables.

Publication

Regular users of the statistical series of starts and completions will notice changes in the presentation of the data from the 1972 publications. This publication contains information on starts and completions in urban agglomerates and centres of 10,000 population and over as defined by the 1971 Census. In the 1971 Census, the concept of "census agglomerate" is somewhat broader than the previous 1966 Census definition of "urban area". In 1966, the population of what is equivalent to a census agglomeration was strictly urban. In 1971, complete rural municipalities are included in the Census Agglomerate provided the urban part of these municipalities constitutes with the main urban centre a continuous built-up area with no separation greater than one mile from the main urban centre. Metropolitan Areas, Large Urban Agglomerates and other Census Agglomerates may therefore contain fringe localities of less than 10,000 urban population.

If users are interested in monthly housing data for municipalities that do not meet the definition of an urban agglomerate of 10,000 population and over as defined for the purpose of the starts and completions survey, they may refer to the monthly publication "Building Permits", catalogue no. 64-001.

Definitions

For the purpose of this report new residential construction activity is measured in terms of physical volume (as opposed to value) and the common unit of measurement is the "dwelling unit". For a given period

Introduction

La statistique que fournit le présent rapport découle de relevés d'envergure nationale effectués par la Société centrale d'hypothèques et de logement. Toutes les zones métropolitaines, agglomérations urbaines et localités urbaines de 10,000 habitants et plus, telles que définies pour les fins du recensement de 1971, font l'objet d'un dénombrement complet tous les mois. Le reste du pays est examiné au moyen d'un sondage quatre fois l'an, soit à la fin des mois de mars, juin, septembre et décembre.

Les rapports pour mars, juin, septembre et décembre ont trait à toutes les régions. Les tableaux des rapports de ces mois-là, qui renferment des chiffres concernant toutes les régions, portent un numéro précédé de la lettre Q. Dans le cas des autres mois, la statistique ne vise que les agglomérations de 10,000 habitants et plus (y compris les zones métropolitaines et les grandes agglomérations urbaines). Les tableaux contenant des données relatives à ces agglomérations sont identifiés au moyen d'un chiffre précédé de la lettre M et paraissent dans chacun des douze rapports mensuels. Dans les rapports qui renferment des données trimestrielles portant sur toutes les régions, les tableaux trimestriels suivent les tableaux mensuels.

Publication

Les usagers de la série des mises en chantier et des achèvements remarqueront des changements dans la présentation des données comparativement à celles fournies dans les publications de 1972. Le présent rapport contient des données sur les mises en chantier et les achèvements dans les agglomérations et les localités urbaines de 10,000 habitants et plus, telles qu'établies aux fins du recensement de 1971. Dans le recensement de 1971, le concept "d'agglomération urbaine" a été élargi par rapport à la notion de "zone urbaine" de 1966. En 1966, la population des agglomérations de recensement était strictement urbaine. En 1971, des municipalités rurales entières sont comprises dans les agglomérations de recensement pourvu que la partie urbaine de ces municipalités forme avec un centre urbain d'importance une zone habitée continue. Les zones métropolitaines, les grandes agglomérations et les autres agglomérations urbaines peuvent donc contenir des banlieux qui soient inférieures à 10,000 habitants.

Si les usagers veulent obtenir des données de la construction domiciliaire pour les municipalités autres que les agglomérations et localités urbaines de 10,000 habitants et plus, ils peuvent consulter la publication "Permis de bâtir", no de catalogue 64-001.

Définitions

Aux fins du présent rapport, l'activité dans le domaine de la construction domiciliaire neuve est mesurée en volume physique (par opposition à la valeur), et l'unité commune de mesure est l'unité de logement". Pour toute période donnée,

the survey is designed to provide information on the number of dwelling units started, dwelling units completed and dwelling units under construction at the end of the period.

For Census purposes a dwelling unit is defined as a structurally separate set of living premises with a private entrance either outside the building or from a common hall, lobby, vestibule or stairway inside the building. The entrance must be one that can be used without passing through anyone else's living quarters.

Examples of dwelling units are; each single house, each half of a double house, each section of a row or terrace, each self-contained apartment, flat or suite in an apartment block, duplex, double-duplex, row-duplex, triplex, maisonnettes and garden-court type of multiple dwellings, each self-contained apartment adjoining a non-residential building such as a school, church, store, factory.

All the above examples of dwelling units fall within the confines of the Starts and Completions Survey except dwelling units created as a result of some structural change and normally referred to as "conversion". Alterations and extensions to existing buildings are also excluded from the Survey.

The Census definition of a dwelling unit includes such structures as summer cottages, cabins, shacks, trailers and boat-houses if they were occupied at the time of the Census by persons with no other usual residence. However, these are excluded from the Starts and Completions Survey which covers only residential construction intended for year-round occupancy.

The broad definition of "dwelling unit" includes also special types of living quarters, such as health and welfare institutions, corrective and penal institutions, religious and educational institutions, hotels, lodging houses, camps, merchant vessels, diplomatic residences, etc. These are usually referred to as "collective-type dwellings" as opposed to private-type dwellings described earlier; the collective-type dwellings are excluded from the Starts and Completions Survey.

To sum up, the Starts and Completions Survey enumerates dwelling units in new structures only, such units being designed for non-transient and year-round occupancy.

A Start, for the purpose of this survey, is recorded when the footing has been installed, that is, when the concrete has been poured for the whole of the footing around the structure.

A Completion, for the purpose of this survey, is the stage at which all the proposed construction work on a dwelling unit has been performed.

For multiple-dwelling structures, the definition of a Start or Completion applies to the structure rather than to the individual dwelling units therein.

The number of units Under Construction at the end of a period as shown in this publication takes into

l'enquête vise à fournir des renseignements sur le nombre d'unités de logement mises en chantier, sur le nombre d'unités de logement achevées et sur le nombre d'unités de logement en construction à la fin de la période.

Au sens du recensement, l'unité de logement s'entend de tout ensemble de pièces d'habitation distinct quant à la structure, avec entrée privée donnant sur l'extérieur ou sur un endroit commun à l'intérieur (corridor, vestibule, escalier). L'entrée doit donner accès au logement sans obliger à passer par les locaux d'habitation d'une autre personne.

Voici des exemples d'unité de logement: toute maison simple, toute moitié de maison jumelée, toute section d'une rangée de maisons; tout appartement indépendant, tous plain-pied ou toute "suite" dans une maison d'appartements, dans un duplex, dans un duplex jumelé, dans une rangée de duplex, dans un triplex, dans des maisonnettes et jardins d'habitation à logements multiples; tout appartement autonome attenant à un immeuble non domiciliaire qui peut être une école, une église, un magasin, une fabrique, etc.

Tous les exemples précités rentrent dans les limites de l'enquête sur les mises en chantier et les achèvements, sauf les unités de logement créées par suite d'une modification de structure habituellement appelée "transformation". Modifications et rajouts n'entrent pas non plus dans le champ de l'enquête.

Par définition (recensement), l'unité de logement comprend des immeubles tels que chalets, cabines, huttes, remorques et bateaux qui, lors du recensement, étaient occupés par des personnes n'ayant pas d'autre résidence régulière. Toutefois, les bâtiments de ce genre sont exclus de l'enquête sur les mises en chantier et les achèvements, laquelle n'embrasse que les constructions domiciliaires habitées à l'année longue.

Dans son sens général, l'unité de logement comprend aussi certains genres particuliers de locaux d'habitation, notamment les institutions de santé et de bien-être, les institutions pénitentiaires et de réforme, les institutions religieuses et éducatives, les hôtels, les maisons d'hébergement, les camps, les navires marchands, les résidences diplomatiques, etc. Ces locaux sont habituellement appelés "logements collectifs" par opposition aux habitations privées décrites précédemment; les logements collectifs ne sont pas visés par l'enquête sur les mises en chantier et les achèvements.

En résumé, l'enquête dénombre uniquement les unités comprises dans les constructions neuves et devant être occupées de façon permanente et à l'année longue.

La mise en chantier, aux fins de l'enquête, est notée lorsque l'empattement est installé, c'est-à-dire lorsque le béton a été coulé dans l'empattement, tout autour de l'immeuble projeté.

L'achèvement, aux fins de l'enquête, correspond au stade où tous les travaux de construction projetés pour une même unité de logement ont été exécutés.

Dans le cas des immeubles à logements multiples, la définition de la mise en chantier ou de l'achèvement porte sur l'ensemble de la construction et non sur ses unités de logement prises en particulier.

Dans la présente publication, le nombre de logements en construction à la fin du mois tient compte de certains rajus-

account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has been made, construction may cease, or a structure when completed may contain more or fewer dwelling units than were reported when construction commenced.

Comparison of Census Tabulations with
Tabulations Presented in this Report

The 1971 Census classifies data on the housing stock according to the following types of dwelling:

Single detached: This type is commonly called a "single house". It contains only one dwelling unit which is completely separated on all sides from any other dwelling or structure.

Single attached: This category includes dwelling units separated by a common wall extending from ground to roof. Single attached dwellings in structures consisting of only two dwelling units are classified as Single attached (double). All other single attached dwellings whether in rows of three or more dwellings or simply a unit adjoining a store or other non-residential structure, are classified as Single attached (other).

Apartment and flats: These dwellings are also subdivided into two categories. Apartment, flat (duplex) refers to each dwelling in a structure originally designed, or structurally converted, to provide two dwelling units, one above the other and adjoining no other structure. Apartment, flat (other) includes all dwellings of the apartment, flat-type other than the duplex-type mentioned above.

Mobile: Refers to any dwelling designed for movement and actually movable, such as a trailer, railway car, or boat, if occupied by persons with no other usual residence at the Census date.

In this report dwelling units have been divided into four categories:

1. Single detached.
2. Two-family: which comprises Single attached (double) and Apartment, flat (duplex). Double-duplexes and row-duplexes are not included in this category.
3. Row: which comprises only single attached houses in a row of three or more dwellings. In the Census tabulations, these are included in Single attached (other). Row-duplexes are not included in the Row category.
4. Apartment and Other: which comprises Apartment, flat (other).

tements qui s'imposent pour des raisons diverses. Par exemple, une fois commencés, les travaux de construction d'un logement peuvent être interrompus; d'autre part, une fois achevée, une construction peut renfermer, soit plus, soit moins de logements qu'on ne l'avait d'abord déclaré au moment de la mise en chantier.

Comparaison des calculs du recensement
avec ceux du présent rapport

Le recensement de 1971 classe les données relatives au stock de logements d'après les catégories suivantes:

Simplets détachés: Ce genre de logement est communément appelé "maison simple". Il ne contient qu'un seul logement complètement isolé, de tous côtés, de tout autre logement ou construction.

Simplets attachés: Cette catégorie comprend les logements séparés par un mur mitoyen s'élevant du sol au toit. Les logements simples attachés faisant partie de structures ne comptant que deux logements sont classés comme simples attachés (maison double). Tous les autres logements simples attachés, qu'ils fassent partie d'une rangée de trois logements ou plus ou qu'il s'agisse simplement d'un logement attenant à un magasin ou à une autre construction non domiciliaire, sont classés comme simples attachés (autres).

Appartements et plain-pied: Ces logements se subdivisent eux aussi en deux catégories. Appartements, plain-pied (duplex): ce sont les logement d'une structure construite ou transformée de façon à donner deux logements situés l'un au-dessus de l'autre sans autre construction attenante. Appartements, plain-pied (autres): ce sont tous les logements du genre appartement ou plain-pied et qui ne sont pas de la catégorie des duplex.

Mobiles: Il s'agit de tout logement destiné à être transporté et réellement transportable (remorque, wagon, ou bateau) s'il était occupé par des personnes sans autre résidence ordinaire au moment du recensement.

Dans le présent rapport, les logements sont répartis en quatre catégories:

1. Simplets détachés.
2. Bi-familiaux: qui comprennent les simples attachés (maison double) et les appartements, plain-pied (duplex). Les doubles duplex et les duplex en rangée ne font pas partie de cette catégorie.
3. Rangées: qui ne comprennent que les maisons simples et attachées en rangée d'au moins trois habitations. Dans les chiffres du recensement, ces genres d'habitations sont compris dans simples attachés (autres). Les duplex en rangée n'entrent pas dans la catégorie des "Rangées".
4. Appartements et autres: comprennent les maisons d'appartements et les plain-pied (autres).

In other words this category includes:

- (i) double-duplex.
- (ii) triplex.
- (iii) row-duplexes.
- (iv) apartments as commonly known.
- (v) dwellings over, or at the back of, a store or other non-residential structure.

As mentioned earlier Mobile dwellings although covered by the 1971 Census are not enumerated in the Starts and Completions Survey.

Autrement dit, cette catégorie inclus:

- (i) les duplex jumelés.
- (ii) les triplex.
- (iii) les duplex en rangée.
- (iv) les maisons d'appartements au sens courant du terme.
- (v) les logements situés au-dessus ou à l'arrière d'un magasin ou de tout autre construction non domiciliaire.

Comme on l'a signalé précédemment, les logements mobiles, dont le recensement de 1971 tenait compte, ne sont pas dénombrés aux fins de l'enquête sur les mises en chantier et les achèvements.

(1) In this table, metropolitan areas, large urban areas and other urban areas include data corresponding to the agglomerates and localities shown in Table M-7 to M-14 inclusive. These tables include housebuilding activity in the urbanized fringe areas even though these areas are under 10,000 population. For classification purposes, metropolitan areas are agglomerations of more than 100,000 population; large urban areas are agglomerations and localities of 40,000 to 100,000 population; other urban areas are agglomeration and localities of 10,000 to 40,000 population. — Dans ce tableau, les zones métropolitaines, les grandes agglomérations, les autres agglomérations et localités urbaines incluent les données correspondant aux zones telles que présentées dans les Tableaux M-7 à M-14 inclusivement; ces tableaux comprennent la construction domiciliaire dans les banlieues même si celles-ci ont une population inférieure à 10,000 habitants. Pour fins de classification, les zones métropolitaines sont des agglomérations de plus de 100,000 habitants; les grandes agglomérations sont des zones urbaines de 40,000 à 100,000 habitants, les autres zones urbaines sont des agglomérations et localités urbaines de 10,000 à 40,000 habitants.
